

H0 mock — EXPECTED case heads in band 31% routed gain $1.92\times$ → NARROW

HEADS IN BAND: 31%

Which heads the router sends to SIEVE

Where the model's heads actually fall

τ distribution — the quantity H0 measures

Sinks and retrieval heads push most of the mass above the band. A real but minority population of mid-sharpness heads remains.

HEADS IN BAND: 72%

Which heads the router sends to SIEVE

Where the model's heads actually fall

τ distribution — the quantity H0 measures

H0 mock — WORST case heads in band 13% routed gain 1.42× → STOP

HEADS IN BAND: 13%

Which heads the router sends to SIEVE

Where the model's heads actually fall

τ distribution — the quantity H0 measures

Bimodal: diffuse heads where uniform already wins, sharp heads where eviction already wins. The interior owns almost nothing.
